PROFESSIONAL SUMMARY

Results-driven DevOps and Platform Engineer with proven experience designing, automating, and operating production-grade, cloud-native infrastructure on AWS, Hetzner, and Kubernetes. Specialized in architecting high-throughput CI/CD pipelines, Infrastructure as Code (IaC) with Terraform and Ansible, and full-stack observability. Demonstrated ownership of mission-critical data systems (Kafka, Redis, ClickHouse, Qdrant), zero-downtime Kubernetes networking migrations, and developer platform optimization. Passionate about engineering high-reliability, secure, and self-healing systems that scale seamlessly.

TECHNICAL SKILLS

Cloud Infrastructure: AWS (EC2, S3, EKS, VPC, CloudWatch, Route 53, ELB), Hetzner Cloud, GCP

Containers & Orchestration: Kubernetes, Docker, Helm, Kustomize, Proxmox VE, Rancher, containerd, Fleet

CI/CD & GitOps: GitLab CI/CD, GitHub Actions, Jenkins, ArgoCD, Docker-in-Docker, SonarQube, Maven

Infrastructure as Code: Terraform, Ansible, CloudFormation

Data & Streaming: Apache Kafka, Kafka Connect, ClickHouse, Qdrant, Redis, KVRocks, PostgreSQL, MongoDB

Observability & Monitoring: Prometheus, Grafana, Loki, Tempo, Alertmanager, ELK Stack

Networking & Security: Cilium (eBPF), Flannel, Traefik Ingress, Nginx, HashiCorp Vault, cert-manager, NetworkPolicies

Scripting & Systems: Python, Bash, Shell Scripting, YAML, Groovy, Linux (Ubuntu/Debian/CentOS), Systemd

PROFESSIONAL EXPERIENCE

DevOps Platform Engineer **Spizen Technologies**

Feb 2026 – May 2026

- High-Performance CI/CD & GitOps:** Architected and managed end-to-end secure, multi-stage GitLab CI/CD pipelines for **nolimitnodes.com** (live platform), establishing automated pipelines for **dev, uat, and prod** branches with BuildKit registry caching, slashing single-service build times by **80% (from 10 to under 2 minutes)**.
- Production Kubernetes & CNI Migration:** Orchestrated end-to-end Kubernetes clusters on Hetzner and Proxmox hosts; executed a zero-downtime CNI migration from Flannel to Cilium (eBPF) for 132+ workloads (Deployments and StatefulSets) with customized MTU tuning, resolving critical disk I/O contention.
- Data Infrastructure & High-Throughput Messaging:** Automated the deployment of high-availability ClickHouse, Qdrant vector databases, and Redis caching layers using Ansible; tuned Apache Kafka pipelines and consumer-group partitions to sustain workloads of **12,800+ operations per second**.
- Full-Stack Observability & Dashboards:** Engineered a comprehensive company-wide monitoring and observability suite using Prometheus, Grafana, Loki, and Tempo, complete with custom Python exporters for real-time Kafka consumer lag tracking.
- Platform Engineering & Collaboration:** Assisted and supported the core engineering team in key areas of the **NoLimitNodes** platform; managed modular Helm charts and secure Proxmox virtual-machine partitions to automate isolated, self-service developer sandboxes.

- **Core Infrastructure Ownership:** Served as the sole owner of CI/CD, release engineering, and infrastructure for *MyBuildGuide* SaaS, deploying a 5-service microservices application on a self-managed multi-environment (Dev, UAT, Prod) Kubernetes cluster.
- **GitLab Pipeline & Deployment Optimization:** Built optimized GitLab CI/CD pipelines with custom per-service change detection that **reduced runtimes by 60-80%**; integrated custom Alembic database migration drift gates that prevented schema inconsistencies before deployment.
- **Helm & Kubernetes Orchestration:** Created and maintained robust Helm umbrella charts featuring atomic upgrades, PodDisruptionBudgets, resource request/limit controls, and PodAntiAffinity rules to ensure high availability and predictable scheduling.
- **Security & Ingress Automation:** Hardened the container ecosystem using Traefik ingress, automated Let's Encrypt TLS with cert-manager, and implemented strict namespace-scoped Kubernetes Secrets and RBAC, entirely eliminating plain-text credentials from source control.
- **Cross-Team Platform Engineering:** Delivered standard platform infrastructure for multiple *Propulse* real-estate sites; maintained shared Docker images, Helm charts, and Linux servers (Ubuntu/Debian) with automated Prometheus scrape jobs and Alertmanager notifications.

KEY PROJECTS

Autonomous AIOps Gateway

Python, Linux, Telegram API, Systemd, Nginx

- Designed a self-healing server-administration assistant that automated incident triage and recovery actions on Linux servers via a secure Telegram bot interface.
- Built custom AI skills that parsed Nginx logs in real-time, classified anomalies, and executed systemd-based remediation playbooks, drastically lowering MTTR.

NSE Options Trading Bot

Rust, Python, AWS (EC2, VPC, S3, IAM, Route 53), Docker

- Deployed a high-frequency trading bot on AWS, architecting a secure custom VPC (public/private subnets, NAT, Elastic IP) and low-latency EC2 instances.
- Containerized the Rust signals engine and Python runner, setting up automated Docker builds, secure IAM role access, and EBS-backed persistent logs.

Medicure, InsureMe & FinanceMe

Kubernetes, Terraform, AWS, Jenkins, Docker, Prometheus

- Provisioned highly available AWS EKS clusters across multiple AZs using Terraform, managing all IAM policies, Security Groups, and node scaling policies.
- Deployed standard Jenkins master-agent pipelines with SonarQube quality gates and Ansible automation to orchestrate multi-environment promotions.

Zomato Clone Application

Jenkins, Docker, AWS, SonarQube, Trivy, Nexus

- Designed a complete DevSecOps pipeline automating build, static analysis (SonarQube 80% coverage check), Trivy container scanning, and Nexus artifact hosting.

CERTIFICATIONS

AWS Expert • Scalable Kubernetes

Docker Essentials • DevOps Engineer (StarAgile)

EDUCATION

Master of Computer Applications (MCA)

IGNOU | 2023 – 2025
